Duncan Canzano

East Lansing, MI | dncanzano@icloud.com | linkedin.com/in/duncan-canzano | github.com/Duncan-17 | duncan-17.github.io

EDUCATION

Michigan State University, College of Engineering *Expected Spring 2027*

Bachelor of Science, Computer Science — Cybersecurity Concentration | Minor in Business | GPA: 3.5

Relevant Coursework: Algorithms & Data Structures, Object-Oriented Programming, Database Systems & SQL, Computer Organization & Assembly (x86-64), Intro to Security, Algorithm Engineering, Biometrics & Pattern Recognition

- Honors & Activities: MSU Non-Resident Scholarship; Sigma Tau Gamma Fraternity — Ethics & Standards Committee Chairman

SKILLS

- **Languages:** Python, JavaScript, Java, C, C++, SQL
- **Tools & Platforms:** Git/GitHub, Docker, Linux/Bash, VS Code, PyCharm, Cloudflare, Visio
- **AI & ML:** Claude Code (AI-assisted development), YOLOv8, PyTorch, OpenCV, ONNX Runtime

EXPERIENCE

Dana Farber Cancer Institute — Hospital Information Systems Intern *Boston, MA | May 2025 – Aug 2025*

- Built Python automation tools in the ESP framework to replace manual lab data transfers, saving an estimated dozens of hours per year
- Helped refactor a 40,000+ line JavaScript laboratory system (L7 LIMS ESP) by mapping its core modules
- Developed and deployed within a Docker-based environment under HIPAA compliance and data-security constraints
- Co-designed a terminal-based automated installation framework with the team's lead developer while leading independent tooling projects

Nobles Day Camp — Group Counselor *Dedham, MA | Summers 2022 – 2024*

- Sole bus monitor and one of 3 counselors for 30–50 children ages 4–7 across 3 summers, coordinating transportation, activities, and daily parent communication

PROJECTS

Clash Royale Clan Dashboard *Summer 2026*

- Solo-built a Cloudflare-hosted analytics dashboard (HTML/JavaScript) tracking long-term member stats for a 50+ person clan, supporting mobile and desktop
- Kick/promotion recommendations generated from the dashboard's analysis measurably improved clan management after release

Meal Prep App *Fall 2026*

- Shipped an offline-first meal-planning web app (React/TypeScript, Cloudflare Workers + D1), in daily use
- Added user accounts, per-user sync, CSP/security headers, rate limiting, CodeQL in CI, and a threat model
- Built with Claude Code as an AI pair programmer: I owned the spec and code review, backed by 545+ tests

IN PROGRESS

Clash Royale AI Bot *Summer 2026 – Present*

- Solo-building a bot that plays from raw screen pixels: custom YOLOv8 detector, unit tracking, and ADB control
- Built an unattended pipeline that logs top players' matches as imitation-learning data (PyTorch, OpenCV, ONNX)
